                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Chimeric; Marek's disease virus; outer membrane protein; fusion protein;
                                                                                                   This sequence represents the chimeric protein 40 K-S which comprises a fragment of the Marek's disease virus outer membrane protein gB fused to an antigenic protein from Mycoplasma gallisepticum. The chimeric protein can be used in recombinant live vaccines for prevention of infection by Mycoplasma gallisepticum, especially as the outer membrane protein shows antigenicity in poultry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1..672 "derived from Marek's disease virus gB protein" 693..1086

This sequence represents the chimeric protein 40 K-C which comprises a fragment of the Marek's disease virus outer membrane protein gB fused to an antigenic protein from Mycoplasma gallisepticum. The chimeric protein can be used in recombinant live vaccines for prevention of infection by Mycoplasma gallisepticum, especially as the outer membrane protein shows antigenicity in poultry.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 241 PSSRILANTNSITDVSWIYSLAGINTKYQFSFSNYGPSTGYLYFPYKLVKAADANNVGLQ 300

                                                                                                                                                                                                                                                                                                                                                                             A restriction fragment of the insert of M.gallisepticum genomic clone pUM-67 containing an open reading frame was sequenced (AAG77857). The ORF encodes an antiquent polypeptide (AAR63230). A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 361
```

```
A restriction fragment of the insert of M.gallisepticum genomic clone pUM-66 containing an open reading frame was sequenced (AAQ77856). The ORF encodes an antigenic polypeptide (AAR63229), A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 NNLNATLEQLKMAKTNLESAINQANTDKTTFDNEHPNLVEAYKALKTTLEQRATNLEGLS 120

The plasmid pUTTW-IP contains a sequence (the TTW-I gene) coding for the 40kD antigen of Mycoplasma gallisepticum under the control of a synthetic promoter. A 1300 bp restriction fragment containing the promoter-ORF sequence was excised and was used in the construction of plasmid pNZ7929-R2. This in turn was involved in the construction of a recombinant avipox virus vector comprising the TTW-I gene, DNA encoding the signal membrane anchor peptide from Newcastle Disease Virus haemagglutinin neuraminidase and FPV sequences. The recombinant avipox virus is useful as a live vaccine

                                                                        The sequence coding for the 40kDa antigen was obtained by PCR amplification of Mallisepticum genomic DNA. The antigen reacts with Mycoplasma-immune or Mycoplasma-infected serum and can be used as a vaccine to protect fowl from M.gallisepticum infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

                                                                                               ö
antigen-antibody reaction with anti-MG poultry sera. It can be used as a vaccine to prevent and diagnose MG infection. Doseage is at least 1 micro gram vaccine / kg. No acute toxicity was noted with a dose of 5 mg / kg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding the protein can be inserted into an expression vector for the prodn. of MG-1 polypeptide which elicits an antigen-antibody reaction with anti-mycoplasma gallisepticum poultry sera. It may also be ligated to other DNA to produce fusion proteins with an N-terminal bacterial enzyme sequence.
                                                                                                                                                                                                                    61 NNLNATLEQLKMAKTNLESAINQANTDKTTFDNEHPNLVEAYKALKTTLEQRATNLEGLS 120

This AA sequence of TMG-1 is encoded by TM-1 base sequence. It has the same sequence as that of a polypeptide expressed in Mycoplasma gallisepticum in nature. When the corresponding DNA sequence is inserted 'into a recombinant vector used to transform a host the antigen protein produced can be used as a vaccine to prevent and diagnose MG infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STAYNQIRNNLVDLYNKASSLITKTLDPLNGGTLLDSNEITTANKNINNTLSTINE-QKT 179

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This is the amino acid sequence of a 261 amino acid protein encoded by a fragment of the Mycoplasma gallisepticum genome. The encoding sequence and the sequence of AAT04075 (encoding a 661 amino acid protein) can be used to detect M.gallisepticum using probes based on nucleotides 1125-1648 and primers based on nucleotides 449-466, the complement of bases 893-919, 1908-1934 and the complement of bases 2184-2210 of AAT04075 and a probe based on nucleotides 718-41 of the DNA encoding this protein. The method using these sequences is faster i.e. is able to detect M.gallisepticum, which causes avian chronic respiratory diseases, within one day, from avian secretions, washings from the lung, respiratory tract, nasal cavity, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NNLNATLEQLKMAKTNLESAINQANTDKTTFDNEHPNLVEAYKALKTTLEQRATNLEGLS 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A restriction fragment of the insert of M.gallisepticum genomic clone pUM-81 containing an open reading frame was sequenced (AAQ77853). The ORF encodes an antigenic polypeptide (AAR63226). A recombinant avipox virus comprising the coding sequence can be used as a live vaccine to protect against infection by Mycoplasma gallisepticum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181 ADALSNSFIKKVIQNNEQSFVGTFTNANVQPSNYSFVAFSADVTPVNYKYARRTVWNGDE 240

                                                                This is the amino acid sequence of a 661 amino acid protein encoded by a fragment of the Mycoplasma gallisepticum genome. The encoding sequence and the sequence of AAT04076 (encoding a 261 amino acid protein) can be used to detect M.gallisepticum using probes based on nucleotides 1125-1648 and primers based on nucleotides 449-466, the complement of bases 893-919, 1908-1934 and the complement of bases 2184-2210 of the sequence, and a probe based on nucleotides 718-41 of AAT04076. The method using these sequences is faster i.e. is able to detect M.gallisepticum, which causes avian chronic respiratory diseases, within one day, from avian secretions, washings from the lung,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8 DANPNNGQ-----TQLEAARMELTDLINAKAMTLASLQDYAKIEASLSSAYSEAETVN 60
multivalent live vaccines, also new probes for detecting Mycoplasma and manipulating its genome
                                                                                                                         Adhesin pWGA1.2 (AAW11978) and adhesin pMGA1.3 fragment (AAW11979) are products of gene sequences (see also AAF15131) isolated from Mycoplasma gallisepticum. DNA constructs incorporating the promoter and/or signal sequences of the pWGA genes can be used in the produ. of multivalent live vaccines. The signal peptide sequence is utilised where attachment of an exogenous antigen gene to the mycoplasma cell membrane is required.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           enatkladsllssivkkitgvee-----ahnkaqpanysfygykrwytellldkqvfp

# Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 6, Application US/08923992A
Patent No. 6280738
GENERAL INFORMATION:
APPLICANT: Tai, Joseph Y.
APPLICANT: Blake, Milan S.
TITLE OF INVENTION: No. 6280738-IgA FC Binding Forms of the Group B TITLE OF INVENTION: Streptococcal Beta Antigens
NUMBER OF SEQUENCES: 34
CORRESPONDENCE ADDRESS:

                                                                                                                           DOMAIN
                          CELLS INTO TISSUES DURING EMBRYONIC DEVELOPMENT BY INTERACTING
MITH OTHER EXTRACELLULAR MATRIX COMPONENTS.
COMPLETE LOSS-OF-FUNCTION BURRIE MORSPHILA.
COMPLETE LOSS-OF-FUNCTION MUTATIONS LEAD TO LATE EMBRYONIC
LETHALITY. CERTAIN PARTIAL LOSS-OF-FUNCTION MUTATIONS GIVE RAISE
TO ESCAPER ADULTS, WHICH HAVE ROUGH BYES ASSOCIATED WITH CHANGES
IN CELL FATE AND PATTERN, MISSHAPPEN LEGS AND DEFECTS IN WING
STRUCTURE.
DIFFERENT POLYPEPTIDE CHAINS (ALPHA, BETA, BETA, BETA, BULCH BE BOUND
TO EACH OTHER BY DISGLIFIDE CHAINS (ALPHA, BETA, BETA, BETA, BETA, BULCH BE BOUND
TO EACH OTHER BY DISGLIFIDE CHAINS (ALPHA, BETA, BETA, BETA, BETA, BULCH BE BOUND
TO EACH OTHER BY DISGLIFIDE CHAINS (ALPHA, BETA, BETA, BETA, BACH BUD.
COMPRESION ONE LONG & THREE SHORT ARMS WITH GLOBULES AT EACH BUD.
TO SUBCELLULAR LOCATION: EXTRACELLULAR; FOUND IN THE BASEMENT
MEMBRARES (MAJOR COMPONENT).
TISSUE SPECIFICITY: NUMLY FORMED MESODERM AND LATER PROMINENTLY
COMPANIAL STAGE: DURING MORPHOGENESIS, MOSTLY IN EMBRYO
DEVELOPMENTAL STAGE: DURING MORPHOGENESIS, MOSTLY IN EMBRYO
DEVELOPMENT AT 10-12 HOURS.
COMPANIS THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT
MITH OTHER LAMININ CHAINS TO FORM A COILED COIL STRUCTURE.
COMPANIS CONTAINS 11 LAMININ DOMAIN IV (DOMAIN VI).
CONTAINS 21.5 LAMININ DOMAIN IV (DOMAIN IV, IS NOT STRUCTURE STR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.
